## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, drawn to a method for enhancing salt tolerance.

Group II, claim(s) 10-13, drawn to a second method for enhancing salt tolerance.

Group III, claim(s) 14, 15 and 17, drawn to a polynucleotide.

Group IV, claim(s) 16 and 18, drawn to a polypeptide.

Group V, claim(s) 19, drawn to a first transgenic plant.

Group VI, claim(s) 20, drawn to a second transgenic plant.

In addition to electing one from Groups I-VI above, Applicant is required to further elect one of the following sequences:

(A) SEQ ID NO:5 encoding SEQ ID NO:6

(B) SEQ ID NO: 7 encoding SEQ ID NO: 8.

(C) SEQ ID NO: 9 encoding SEQ ID NO: 10.

(D) SEQ ID NO: 11 encoding SEQ ID NO: 12.

(E) SEQ ID NO: 13 encoding SEQ ID NO: 14.

(F) SEQ ID NO: 15 encoding SEQ ID NO: 16.

Art Unit: 1638

The sequences of (A)-(F) are chemically, structurally and biologically distinct from each other.

2. The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: genes that confer salt tolerance are known in the art (specification, p. 3). The two methods for enhancing salt tolerance utilize different genes and would have different results. The polynucleotide and the polypeptide are chemically, structurally, biologically and functionally distinct from each other. The polynucleotide can be used for hybridization and diagnostics while the polypeptide can be exogenously into an untransformed plant to increase salt tolerance or for making antibodies. The first transgenic plant has a different polynucleotide from the second transgenic plant and thus the two are structurally distinct from each other.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

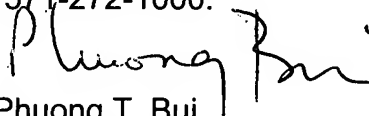

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuong T. Bui whose telephone number is 571-272-0793.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anne Marie Grunberg can be reached on 571-272-0975. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
